A terminal window screenshot showing the execution of a bash script. The prompt is root@ip-172-31-12-187: /home/ubuntu/Scripts. The script content is displayed in color: #!/bin/bash, c=1, while [\$c -le 5], do, echo "Welcone \$c times", ((c++)), done. The user enters vi dowhile1.bash, then chmod 777 dowhile.bash, which fails with "cannot access 'dowhile.bash': No such file or directory". Then they enter chmod dowhile1.bash, which fails with "missing operand". They then enter chmod 777 dowhile1.bash successfully. Finally, they enter ./dowhile1.bash, which outputs "Welcome 1 times" through "Welcome 5 times".
